## Key Risks

General risks of investing in a unit trust fund	
<b>Returns not guaranteed</b>	The investment of the fund is subject to market fluctuations and its inherent risk. There is <b>NO GUARANTEE</b> on the investment returns, nor any assurance that the fund's investment objective will be achieved.
<b>General market environment risk</b>	Refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.
<b>Inflation risk</b>	This is the risk that your investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Manager's risk</b>	This risk refers to the day-to-day management of the fund by the manager which will impact the performance of the fund, e.g. investment decisions undertaken by the manager as a result of an incorrect view of the market may adversely affect the performance of the fund.
<b>Loan financing risk</b>	This risk occurs when you take a loan/financing to finance your investment. The inherent risk of investing with borrowed money includes you being unable to service the loan repayments. In the event units are used as collateral, you may be required to top-up your existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower NAV per unit as compared to the NAV per unit at the point of purchase towards settling the loan.

## Specific risks of the Fund

<b>Lack of discretion by Manager to adapt to market changes</b>	As this is an index tracking fund, the Fund intends to replicate the performance of its benchmark index. We have limited discretion to alter the security allocation. Therefore, we may not dispose a poorly performed index constituents even if it may adversely affect the Fund's value and its NAV per unit.
<b>Risk associated with investment in derivatives</b>	As the Fund may invest in derivatives, it may be subject to risks associated with such investments. Investments in derivatives may require the deposit of initial margin and additional deposit of margin on short notice if the market moves against the investment positions. If no provision is made for the required margin within the prescribed time, the Fund's investments may be liquidated at a loss. As such, investments in derivatives may increase likelihood of high volatility of the NAV per unit of the Fund. Therefore, it is essential that such investments in derivatives be monitored closely. We have the necessary controls for investment in derivatives and have in place systems to monitor any derivative positions for the Fund.
<b>Risks associated with investment in warrants and/or options</b>	There are inherent risks associated with investment in warrants and/or options. The value of warrants and/or options are influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract.

**Note:** Please take note that if your investments are made through an IUTA via a nominee system of ownership, you would not be deemed to be a Unit holder under the Deed and as a result, you may not exercise all the rights ordinarily conferred to a Unit holder (e.g. the right to call for Unit holders' meetings and the right to vote at a Unit holders' meeting).
