Fund Manager's Report

For the month of March, the Fund decreased 2.34%, underperforming the absolute benchmark by 307 basis points (bps). For the month, the major detractors were Malaysia, Vietnam and Thailand. By sectors, the major detractors were Technology, Real Estate and Consumer Discretionary.

Post US-election, inflation expectations have been reversed again under President Trump 2.0. Volatility returned to FX and bond markets that led to ASEAN central bankers being more cautious. Asean markets saw strong foreign outflows and reluctant buying from domestic investors due to macro factors and ongoing concerns about domestic political situations. Philippines' central bank is hinting of an easing cycle as early as April, ahead of a June cut forecast by the Street. Vietnam's central bank lowered Treasury bill rate from 4% to 3.2% in the last 2 weeks of February, possibly laying the groundwork for an easing path. Earnings expectations have been revised down post US-election and on heightened FX volatility.

Nonetheless, until bond yield and FX stabilize, we reckon ASEAN markets will remain volatile along with other emerging markets. Irrespective of the chatters, we reckon it is opportune time to add into high quality names that have been sold off that would emerge stronger in the longer term.

Going forward, we believe ASEAN equities continue to provide unique opportunities of structural themes despite sustained volatility. We adopt a barbell approach of growth and yield. We continue to focus on quality companies benefiting from long-term growth of ASEAN income and consumption via sectors such as financials, consumer and real estates. Further recovery of tourism will be a boost to economy. Although we also like structural growth themes of Vietnam & FDI, technology & supply chain shift, and ASEAN internet, we are waiting for further clarity on the developing global trade dispute. We also take opportunities to lock in attractive sustainable dividend yields. As part of our absolute return strategy, we continue to be disciplined in taking profit from outperformers. We have been taking advantage of the recent market weakness, rotating to more attractive opportunities within the abovementioned themes.

[^]Based on the fund's portfolio returns as at 15 March 2025, the Volatility Factor (VF) for this fund is 8.2 and is classified as "Low" (source: FIMM). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by FIMM based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. We recommend that you read and understand the contents of the Principal ASEAN Dynamic Fund Prospectus Issue No. 5 dated 14 April 2023 which has been duly registered with the Securities Commission Malaysia, before investing and that you keep the said Fund Prospectus for your record.
