Fund Manager's Report

The Fund was up 4.12% in AUD terms in March, outperforming the benchmark by 347 bps. YTD, the Fund is up 11.85%, outperforming the benchmark by 992 bps.

The MSCI AC Asia Pacific ex Japan Index rose by 2.3% in USD terms in March. Inflation proved to be more persistent than expected in the US as headline inflation increased 0.4%MoM or 3.2%YoY in February. All eyes were on FOMC meeting if the dot plot will reflect a lower number of rate cuts this year, especially after a strong February nonfarm payrolls number too. Eventually, the Fed decided to maintain its median forecast for three cuts for this year, in line with market expectations. Moreover, the Fed raised the core PCE inflation forecast for 2024 from 2.4% to 2.6%, implying that they do not need to see inflation drop below 2.5% before cutting rates. China manufacturing PMI surprised on the upside, with NBS PMI exceeding 50 in March and exports grew more than expected. These are green shoots that indicate the policies are working its way through the economy. We retain our view that China growth outlook hinges critically on government policies. There are also upcoming elections in South Korea and India. We expect stability in India politics, while the polls in South Korea are casting doubts on the execution of the "Corporate Value-Up Program". The current government aim to promote shareholder returns through "Corporate Value-up Program", akin to what happened in Japan, which could result in a re-rating in the stock market in the longer run. We have a positive view on Asian equities. Within China, being selective on companies with strong cashflow and dividends has been rewarding. Our current ideas include semiconductor manufacturing and the value chain for more advanced chips, demand for better engineering solutions as industries grow, discretionary consumption, beneficiaries of Korea's value-up program, India's private sector revival and high dividend yielders. We took profit on our Japanese investments and switch to consumer discretionary and healthcare sectors. Other risks would be (1) Inflation may prove more sticky than expected, (2) continued weak business and consumer sentiment in China, (3) rising geopolitical risks.

^Based on the fund's portfolio returns as at 15 March 2024, the Volatility Factor (VF) for this fund is and is classified as "" (source: FIMM). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by FIMM based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC.
