Brief Information on Principal Heritage Balanced Fund

The Fund is wholesale feeder fund issued by Principal Malaysia. The Fund aims to provide income and capital growth through investments in one (1) collective investment scheme, which invests in a diversified portfolio of mixed asset. The Fund is established with a multi-class structure and is allowed to establish new Class(es) from time to time without your prior consent.

This is neither a capital protected nor capital guaranteed fund.

Product Suitability

The Fund best suits you if you:

- seek long-term capital appreciation and regular income; and

Key Risks

General risks of investing in a fund	
Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment which includes your investment capital and returns, nor any assurance that the fund’s investment objective will be achieved.
Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund’s NAV.

Inflation risk	This is the risk that your investment in the fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Financing risk	This risk occurs when you take financing to finance your investment. The inherent risk of investing with financed money includes you being unable to service the finance repayments. In the event units are used as collateral, you may be required to top-up your existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower NAV per unit as compared to the NAV per unit at the point of purchase towards settling the finance.

Specific risks related to the Fund

Currency risk	<p>You should be aware that currency risk is applicable to Class(es) (e.g. Class MYR) which is in a different currency than the base currency of the Fund (i.e. SGD). The impact of the exchange rate movement between the base currency of the Fund and the currency denomination of the respective Class(es) may result in a depreciation of the value of your holdings as expressed in the currency denomination of the Class(es).</p> <p>As for a hedged Class, the Class itself provides mitigation to the currency risk arising from the difference between the currency denomination of the Class and the base currency of the Fund. While we aim to fully hedge the currency risk for a hedged Class, you should note that it may not entirely eliminate currency risk. In addition, you should note that, as a result of hedging, a hedged Class will not be able to enjoy the full benefits of the currency movement in the event of a favourable movement of the currency denomination of the hedged Class against the base currency of the Fund. You should also note that hedging incurs costs, in which will impact the NAV of a hedged Class.</p>
Manager risk	Since the Fund invests into CIS that is managed by another manager, the Target Fund Manager has absolute discretion over the Target Fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Target Fund, the NAV of the Fund, which invests into the Target Fund, would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, we reserve the right to seek for alternative CIS that is consistent with the objective of the Fund, subject to your approval.
Country risk	As the Fund invests in the Target Fund which is domiciled in Singapore, the Fund's investments in the Target Fund may be affected by risks specific to Singapore. Such risks include adverse changes in Singapore's economic fundamentals, social and political stability, laws and regulations and foreign investments policies. These factors may be an adverse impact on the prices of the Target Fund's investments, which will depress the Target Fund's NAV growth, and consequently depress the Fund's NAV growth.
Risk associated with income distributions	As the Fund invests predominantly in the Target Fund, the Fund's ability to distribute income will subject to the performance of the Target Fund. In addition, the Target Fund Manager considers coupons, dividends and realised capital gains as income, while unrealised capital gains are considered as capital. The Target Fund Manager may distribute income out of capital, and it is equivalent to a reduction or return of an investor's initial capital. Please refer to Section 1.8.4 "Specific Risk Related to the Target Fund" in the Information Memorandum for more information on risk associated with income distribution at Target Fund level.
