**Fund Manager's Report**

During the month, our Fund rose 1.60% in MYR terms, outperforming the Benchmark by 101 basis points driven by a contribution from South Korea and Malaysia.

The US Fed has gone from raising rates and tackling inflation in 2023 to calibrating how many rate cuts to implement from 2024 onwards. This should be supportive for equities in terms of multiple expansion provided earnings do not disappoint significantly. In the US Fed's December projections, the median policy rate is expected to decline by 80bps to 4.6% in 2024 and a further 100bps to 3.6% in 2025. The magnitude of rate cuts would highly depend on the inflation and economic growth trajectory, whereby a soft landing is currently expected. In Asia, several themes appear attractive including the recovery of the technology hardware cycle, broad-based growth in India and dividend yielders. While China has turned stimulative in its policies, the efficacies of these policies remain a work-in-progress with recent flip-flops in Internet regulations making the recovery path more opaque. In 2024, we would observe how US-China geopolitical tensions evolve especially in an election year in the US. Risks: a) A hard landing in the US b) Geopolitics: US-China tensions which can range from various sanctions, financial markets and military conflicts

We remain fully invested and well positioned in the areas of a) bottoming of the tech hardware cycle b) strong private sector confidence in India c) selected global names with resilient demand in the areas of consumption, energy and technology. During the month, we trimmed selected consumer names in India due to the slower than expected recovery with the intention of revisiting these ideas in the coming quarters. We bought an Australia company with exposure to the US housing market and also a global software company for chip designing.

For fixed income, we remain positive on the domestic sukuk market as we believe that OPR will stay put at 3% this year. Overall, we maintain our strategy and continue to overweight in the credit segment for better yield pickup.

^Based on the fund's portfolio returns as at 15 February 2024, the Volatility Factor (VF) for this fund is 5.86 and is classified as "Low" (source: FIMM). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF.
