Key Risks

General risks of investing in the fund	
Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the fund's investment objective will be achieved. You should also note that the fund is neither a capital guaranteed fund nor a capital protected fund. However, we reduce this risk by ensuring diligent management of the assets of the fund based on a structured investment process.
Legal and regulatory risk	The value of the fund may be affected by uncertainties in the legal and regulatory environment. A change in law or regulation made by government or regulatory body will materially impact the value of securities, business, sector or even market as a whole. You should also note that laws and guidelines relating to PRS may change and this may affect your PRS account and/or your ability to access your account balance.

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's NAV.
Risk associated with Default Option	If you are in the Default Option, your current investments will be automatically switched into another Fund upon attaining the next age group. The NAV per Unit may be lower at the point of switching than the NAV per Unit when you initially contributed into the Fund. Hence, you may have to suffer losses relating to your investment costs upon disposal.
Liquidity risk	Liquidity risk refers to the ease of liquidating an asset depending on the asset's volume traded in the market. If the fund holds assets that are illiquid, or are difficult to dispose of, the value of the fund will be negatively affected when it has to sell such assets at unfavourable prices.
Inflation risk	This is the risk that your investment in the fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased. This risk can be mitigated by investing in securities that can provide a positive real rate of return.
Manager risk	This risk refers to the day-to-day management of the fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by the manager, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.
Specific risks of the Fund	
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the Fund's NAV.
Risks associated with investment in warrants/options	There are inherent risks associated with investment in warrants/options. The value of warrants/options are influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract. Generally, the erosion in value of warrants/options accelerates as it approaches its expiry date.

You should be aware that an investment in a PRS may be exposed to other risks from time to time. If in doubt, please refer to the Replacement Disclosure Document or consult professional advisers for a better understanding of the risks.
