MARKET REVIEW (1 DECEMBER 2024 TO 28 FEBRUARY 2025)

During this period, global equities experienced notable volatility, with significant declines in February 2025 after a strong start to the year. Investor concerns about US economic growth and President Donald Trump's new tariff plans led to a retreat in US stocks, which subsequently affected developed market stocks and the broader global equity market. Despite these challenges, global manufacturing activity expanded for the second consecutive month, and global services activity showed growth in several regions.

The information technology ("IT") sector remained in negative territory throughout February, ranking ninth among the global stock market's 11 major sector groups. Five out of six IT-related industries sold off, with IT services faring the worst; their combined loss was partially offset by a modest gain for companies in the technology hardware, storage, and peripherals space. The implementation of the European Union Artificial Intelligence ("Al") Act in February introduced new compliance requirements for AI systems, adding pressure on tech companies to adapt quickly.

In response to these factors, many tech companies announced significant layoffs as part of their costcutting measures. This could lead to a leaner workforce and potentially more efficient operations, with companies increasingly focusing on AI and automation to drive future growth. Despite the bearish market sentiment, some companies may emerge stronger and more focused on their core competencies, while others may struggle to adapt and lose market share.

MARKET OUTLOOK*

Despite recent equity market volatility, the technology sector is expected to benefit from a generally favorable market backdrop in 2025. Stable monetary policy, potential deregulation, and Al-driven productivity gains are anticipated to contribute to a healthy economic environment in the United States. This should support continued investment in digital transformation and the multiyear generative Al ("GenAl") investment cycle. The sector is likely to see another strong year of earnings growth, driven by a steady progression up the GenAl adoption curve, an improving earnings growth trajectory outside of the "Magnificent Seven" companies, and reasonable valuations on an earnings growth-relative basis.

However, there are potential risks to consider. These include the timing and magnitude of GenAl demand, geopolitical risks related to advanced technology export restrictions, and regulatory risks from both antitrust and Al perspectives. Despite these challenges, the technology sector's ability to innovate and adapt, along with a more stable inflation and interest-rate environment, supports a favorable long-term growth trajectory.
